EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone call from Attorney Donald Hill on July 5, 2011.

Claims 1 and 3-4 of the application have been amended as follows:

1. (Currently amended) An article joint purchase system using a network, for managing, via the network, purchase application information on an article which is inputted by each of a plurality of applicants for purchase through a terminal device, the article being produced, transported, or purchased on a lot basis on the network, the system comprising:

an accepting means for accepting the purchase application information inputted through the terminal device and reporting an application for purchase, an entry price (which is a price at which or under which [[the]]purchase is desired) of ~~a particular~~ the article, and a desired quantity;

an order data table for storing the application for purchase, the entry price, and the desired quantity, in association with one another;

a condition table for registering ~~[[an]]~~ a resultant initial cost obtained by adding a profit to an initial production cost that includes a design cost and an artwork production cost, a fixed cost obtained by adding a material cost per one piece of the article to a

Art Unit: 3628

production cost per one piece of the article, and a maximum sales quantity which corresponds to the quantity of the article in one lot; and

a quantity and price determining means for:

comparing a first value obtained, each time the purchase application information is accepted by the accepting means, by multiplying the entry price set in the purchase application information by the total of desired quantities entered at prices equal to or higher than the entry price at the time of acceptance, with a second value obtained by adding the resultant initial cost registered in the condition table to a value obtained by multiplying the fixed cost by the total of desired quantities entered at prices equal to or higher than the entry price at the time of acceptance, and

determining the sales to be made with respect to the purchase application information and transmitting the entry price as a sales-determined price to the terminal device if the first value is equal to or larger than the second value,

the quantity and price determining means declining to determine the sales to be made if the first value is less than the second value;

wherein the quantity and price determining means calculates a current price by using the following formula:

Current price = resultant initial cost ÷ (total of desired quantities × α + β) + fixed cost,

where α and β are parameters that ~~may be~~are set by ~~[[the]]~~a user ~~as long as~~with $1 \geq (\alpha + \beta)$, and transmits the current price to the terminal device.

Art Unit: 3628

3. (Currently amended) The article joint purchase system using a network according to claim 1, wherein the condition table further registers a joint purchase start price obtained by adding the resultant initial cost to the fixed cost, and a limit sales price that is a lowest price per one piece of the article in one lot.

4. (Currently amended) The article joint purchase system using a network according to claim 3, wherein the limit sales price is obtained by adding the fixed cost to a value obtained by dividing the resultant initial cost by the maximum sales quantity.

The abstract is amended as follows:

A flexible joint purchase order system in which a sales price is determined based on demand without causing a seller to have a loss. ~~The system includes, comprising:~~ an accepting means for accepting purchase application information and reporting an application for purchase, an entry price of an article, and a desired quantity; an order data table for storing the application for purchase, the entry price, and the desired quantity; a condition table for registering an initial cost, a fixed cost, and a maximum sales quantity; and a network for comparing a first value (equal to the entry price times the desired quantity of articles entered at prices equal to or higher than the entry price) with a second value (equal to the initial cost added to the product of the fixed cost and the desired quantity), for determining the sales to be made, and for transmitting the entry price as the sales-determined price ~~to the terminal device.~~

Allowable Subject Matter

1. Claims 1 and 3-4 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Van Horn, U.S. Patent No. 6,631,356 B1, and Carter, S., Macdonald, N.J., and Cheng, D.C.B., Basic Finance for Marketers, Food and Agriculture Organization of the United Nations, Rome, 1997.

Van Horn discloses:

- an article joint purchase system using a network, for managing, via the network, purchase application information on an article which is inputted by each of a plurality of applicants for purchase through a terminal device, the article being produced, transported, or purchased on a lot basis on the network;
- an accepting means for accepting the purchase application information inputted through the terminal device and reporting an application for purchase, an entry price (a price at which or under which the purchase is desired) of a particular article, and a desired quantity;
- an order data table for storing the application for purchase, the entry price, and the desired quantity, in association with one another;
- a condition table for registering a maximum sales quantity which corresponds to the quantity of the article in one lot;
- a quantity and price determining means, operating each time the purchase application information is accepted by the accepting means, which determines if a

Art Unit: 3628

transaction occurs and which transmits the entry price as a sales-determined price to the terminal device;

- wherein, if a transaction occurs, the quantity of goods is sold for which entry prices were submitted that were greater than or equal to the entry price that became the final price.

Carter discloses:

- wherein minimum required revenue equals profit plus costs;
- a cost obtained by adding a profit to a non-variable cost;
- calculating a minimum required revenue by adding a total variable cost to a cost obtained by adding a profit to a non-variable cost.

As per claim 1, the closest prior art of record taken either individually or in combination with other prior art of record fails to teach or suggest wherein the quantity and price determining means calculates a current price by using the following formula:

Current price = resultant initial cost ÷ (total of desired quantities x α + β) + fixed cost,

where α and β are parameters that are set by a user with $1 \geq (\alpha + \beta)$, and transmits the current price to the terminal device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
